

Poly Spring Pads
Part # PSP

In a product enhancement, SuperSprings will be including their new Poly Spring Pads – part # PSP – with all SSA 10's; SSA13's; SSA16's and SSA17's that are shipped after January 1st 2007

The Poly Spring Pad, shown above, is a dense polyurethane block that has been designed to seat between the top of the vehicle springs pack and the underside of the SuperSpring for applications where the factory springs sit above the axle and no mounting kit (MTKT) is used.

The poly spring pad provides a friction seat which eliminates the possibility of the SuperSpring shifting after installation. The poly spring pad has been manufactured to accommodate Ford, Chevy and Dodge applications.

Step 1 – With PSP in place

Step 2 – With SuperSpring installed

Two poly spring pads will be included and shipped with each set of the SuperSprings referenced above.
